PrEP Fee Proposal

The STD/HIV clinic for the Salt Lake County Health Department will be starting a pilot program in the year 2020 to provide Preexposure Prophylaxis (PrEP) for the prevention of HIV infection in the state of Utah. PrEP is a combination of two HIV medications that if taken once a day can decrease the risk of a patient from acquiring HIV infection. Findings from several clinical trials have demonstrated safety and substantial reduction in the rate of HIV acquisition by 92% to 99%. Indication for the use of PrEP are for those that have specific behaviors that may place them at risk for HIV. The purpose of PrEP is to protect them from HIV acquisition.

The goal of the Salt Lake County Health department is to be able to provide low cost PrEP services. The new fees that are proposed will be based on price packaging. The CDC outlines standards in which the nursing staff follows to insure efficacy and safety of PrEP.

When providing PrEP there will be a required visit and testing schedule. Below is the scheduled visits and the costs of the visit.
