

Gregory R. Christensen (Greg)

I have been employed in a broad array of vocations that have provided me with insight in many areas of concern in the water industry. I was a civil engineering draftsman. This gives me the ability to read and understand the infrastructure development needs of the district. Background in IT development, as a computer programmer, giving me knowledge and access to resources for potential troubleshooting. I have also been a physical security consultant, providing the ability to assist with "down and dirty" reviews of Risk and Resilience Analysis reporting.

Currently serving as a member of the Kearns Improvement District Board of Trustees. I have participated as a member of this board during the major decision processes which included multiple facilities construction and administrative realignment. These have provided better service and growth potential for the customers of the area. Recently served on the team that selected a new General Manager/CEO for the organization. Reelected to a new 4-year term in 2019.

While serving on the Jordan Valley Water Conservancy District Board of Trustees, I have been actively involved in the ongoing planning processes. These processes have helped to insure that the water needs of Salt Lake County can be met for the coming decades. This takes a knowledgeable and committed member of the board that has been exposed to the workings of the district for an extended period of time.

Representing Division 2 of that board which includes: Kearns Improvement District, Hexcel, and Magna Water. I am a strong advocate for these organizations to insure they are not unduly burdened by the actions of the Jordan Valley Water Conservancy District.

Strengths

- Polished Communications Skills
- Strong analysis and trouble shooting skills
- Excellent organizational and planning skills
- Problem solving with results
- An accomplished presenter to both internal and external customers

Community Involvement
