

Waste Codes/Pricing Review

Goal – to simplify and reduce subjectivity and confusion when processing “General Public Small Loads” through the scale at the landfill, as well as reduce the number of required weigh backs.

Current Waste Codes and pricing for these loads are:

T1 (Mixed Trash Under 9,000 lbs. GVW) Flat Rate \$16.00
T1C (Concrete/Asphalt Under 9,000 lbs. GVW) Flat Rate \$11.00
T1D (Soil/Sod Under 9,000 lbs. GVW) Flat Rate \$11.00
T1G (Green Waste Under 9,000 lbs. GVW) Flat Rate \$11.00

We often see the T1C, T1D, and T1G loads come in with mixed other materials and trash not declared and under the specified material. These small loads are not being used for any beneficial use, due to the inconsistency of these loads.

Proposed Waste Code and pricing:

T1 (All Cars, Pickup Trucks, and manually unloaded trailers) Flat Rate \$15.00 ea.

This includes all the waste types previously under T1, T1C, T1D, and T1G Waste Codes

Impact to revenue from this change:

2019 and 2020 YTD data were reviewed for all the T1 Waste Codes (based on 2020 pricing) to compare with what the revenue would be based on this proposed pricing. Revenue was calculated to be up 1.3% (2019 volumes) to 4.8% for 2020 YTD volumes (higher due to the additional loads of green waste received in 2020).

Larger Trucks and Mechanically Dumped Trailers would be charged the per ton rate for specified materials. These Material Codes and Pricing will not be revised.
